

U.S. CMS Project Progress- 3rd Quarter FY2003

Installation of Cathode Strip Chambers (CSCs) onto the CMS Endcap disk is a success! Over 70 of the 148 U.S. produced CSCs have been delivered to CERN with ~40 of these chambers now mounted in the surface building. The CSCs have been built by Fermilab, with final outfitting and testing completed by the University of California (UCLA and Riverside) and the University of Florida-Gainesville. The University of Wisconsin designed a mounting fixture used for this installation.
